

Perhaps the hardest hitting bullet ever made!

F E A T U R E S

1) PREMIUM POLYMER TIP

The sharp point improves ballistic performance, accuracy and initiation of expansion.

2) BONDED CORE

The bonded design ensures that the bullet achieves controlled expansion with virtually no fragmentation and the core will never, ever, ever, ever separate from the jacket.

3) EXPANSION CONTROL RING

Controls expansion to form a large, flat mushroom and a wide wound channel over twice the bullet diameter.

4) THICKER, TOUGHER, STIFFER JACKET

Necessary to retain weight and guarantees over twice the bullet diameter.

.692" Expanded

When it comes to applying science to the art of hunting, there's never been a better example than the Hornady InterBond.

The Hornady InterBond uses a proprietary bonding process that holds the core and jacket together no matter what the bullet encounters. Simply stated, the core will not separate from the jacket — period.

And, unlike partitioned or dual-core bullets, where the front core can separate from the bullet mass, the InterBond holds together in a single, destructive mass that delivers a deep, wide wound channel without over-penetrating.

Thanks to the bonding process and a thicker, stiffer jacket, the InterBond retains more than 90% of its mass — even through tough hide and large bones. In addition to weight retention, the InterBond expands immediately to more than twice its diameter for maximum energy transfer at any range.

Combine all that hard-hitting power with the proven ballistic advantages of our SST design, and you have a super-accurate bullet that delivers maximum energy right where you aim.

Best of all, the Hornady InterBond packs all this premium performance into a bullet priced lower than the competition.

When it comes to accuracy, Hornady's InterBond rules the bullet world. Among premium bullets, the Hornady InterBond is the one that delivers an unprecedented combination of accuracy, expansion, and deadly penetration — all at a price that's up to 40% less than other premium bullets.

150 gr Performance Results:

Rifle:

Winchester M-70, 24" barrel

Caliber: 150 gr 30-06 Sprg

Muzzle Velocity: 3000 fps

100 yd velocity	2461 FPS	2416 FPS	2473 FPS

Arnold W., (via email)
Manitoba, Canada

"I am writing to praise you about the new InterBond 165 gr. bullets. I used them on a very successful hunting trip – shooting a 1,350 lb. moose. The first shot went into the lower chest taking out the bottom of the lung. The second went into the neck area. The moose went down after taking just one step. Neither shot went through...putting good energy into the kill. We did not throw away any meat due to bullet damage. The bullets opened up to a good mushroom size, and when I weighed them, they still had 97% of their original weight!"

Dennis C., (via email)

Dennis shared an extensive account of a hunt in Spain — his first using our Hornady InterBond 139 gr., 284. "This was a tough hunt," he writes. "The Southeastern ibex had no idea we were there, and he was 200 yards below us at a 30 degree angle down. At the crack of the 7mm Mag, the ibex collapsed. The bullet entered just left of center, destroying the animal's right front shoulder. The bullet was recovered six inches behind the breastbone, just below the stomach. With all that damage, it still weighed 118.8 grains!"
